

## CLAIMS

1. A medal tray provided for a medal game machine as a portion where medals are ejected, comprising:
  - a bottom wall on which medals are accumulated; and
  - side and rear walls surrounding three sides of the bottom wall,wherein the rear wall is provided with a protrusion portion for regulating accumulation of medals along the rear wall, so that the protrusion portion projects forward and is provided above the bottom wall so as to be separated from the bottom wall.
2. The medal tray according to claim 1, wherein the side wall has a medal ejection port, and the protrusion portion is disposed between the medal ejection port and the bottom wall.
3. The medal tray according to claim 1 or 2, wherein a curved wall is provided between the bottom wall and the protrusion portion.
4. The medal tray according to any one of claims 1 to 3, wherein the protrusion portion is tapered in the vertical direction from a base portion joined to the rear wall toward a tip.
5. The medal tray according to any one of claims 1 to 4, wherein the protrusion portion is provided in the overall length in the width direction of the rear wall.
6. A medal game machine having a medal tray according to any one of claims 1 to 5.
